PROFESSIONAL SUMMARY

Java Backend Developer with practical knowledge in designing scalable backend applications through the utilisation of Java, Spring Boot, Spring Security, Microservices and MySQL. Expertise in designing secure REST APIs using JWT Authentication, Data JPA and Hibernate following the concept of clean architecture. Sound understanding of Data Structures & Algorithms, OOPs.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript
Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices
Databases: MySQL
Messaging & Distributed Systems: Apache Kafka
Web Technologies: HTML5, CSS3
Version Control & DevOps: Git, GitHub, Maven, Docker, Kubernetes (Basics)
IDEs & Tools: IntelliJ IDEA, VS Code, Eclipse, Postman
Core CS: Data Structures & Algorithms, OOPs
Soft Skills: Problem Solving, Team Collaboration, Communication

PROJECT EXPERIENCE

Grocery Credit & Billing Platform
Full-Stack / HTML, CSS, JavaScript, Java, Spring Boot, Microservices, Docker, MySQL, Spring Security

- Designed an innovative **microservices architecture** for a credit and billing system for shopkeepers and customers, coordinating **5+ different microservices** using an **API Gateway** and a **Eureka Server**.
- Implemented n **JWT token authentication** with **role-based** access control, creating distinct customer and shopkeeper workflows that reduced navigation steps and improved login success rate.
- Developed **20+ RESTful endpoints** utilising **Spring Data JPA** and **Hibernate** for customer signup, credit/debit transactions, transaction history, and outstanding balance.
- Decreased service coupling by enabling inter-service communication using **OpenFeign**, allowing authentication, transactions, and payments modules to scale independently.

HostelConnect - Resident Services & Support
Full-Stack / Java, Spring Boot, Spring Security, MySQL, HTML, CSS, JavaScript

- Created a **microservice-based system** managing hostel management tasks like registration, room allocation, fee calculation, and complaints handling for **2 different user roles** (Hosteler, Hostel Owner).
- Protected **15+ endpoints** with **tiered permission login**, restricting access to certain information according to the roles, ensuring security of student and administration record information.
- Created blood donor matching and complaints management system with **real-time status tracking**, streamlining the complaint resolution workflow for faster administrative follow-up.
- Ensured quality of endpoints using **20+ Postman test cases** before deploying the product and managed the codebase using **Git/GitHub** with layered architecture.

Employee Management System
Java, Spring MVC, MySQL

- Implemented a **console-based application** called Employee Management System for HR personnel to create, modify, delete, search, and retrieve employee data using **Java** and **MySQL Database**.
- Used the **three-tier architecture** approach (Controller, Service, DAO) for building this application to ensure modularity, separation of concerns, and easy enhancement in the future.

TECHNICAL PROFILES

GitHub: github.com/sohan91 — **10+** personal and academic repositories including microservices, REST APIs, and backend projects
Competitive Programming: 150+ problems solved on LeetCode in Java

EDUCATION

- **Vidya Jyothi Institute of Technology, Hyderabad**
  B.Tech – Computer Science & Engineering (AI & Data Science) — ***CGPA: 8.33 | 2023–2026***
- **St. Mary's Engineering College, Hyderabad**
  Diploma – Computer Science Engineering — ***CGPA: 8.39 | 2020–2023***

CERTIFICATIONS

- **DSA in Java** — Scalar
- **SQL and Relational Databases** — Scalar
